

PLATOWOOD FRAKÉ

Fraké is a fast-growing hardwood, originating from responsibly maintained forests in West-Africa. The flawless wood surface has a beautiful flame-like patterned grain which is accentuated by the Platowood finishing process.

Technical information

In some batches of Fraké, black lines and an absence of pinholes, give this type of wood an even more striking and characterful appearance. Fraké is a firm and resistant wood type that is extremely well suited to a variety of applications, including cladding and frame wood. The wood can be easily applied and ages beautifully and evenly.

Characteristics

- Characterful aesthetic
