

# Platowood Poplar

Platowood Poplar originates from FSC-certified forests in Europe. The wood species is light in weight and is normally used in packaging materials, paper, plywood and clogs. Through the unique hydro-thermal modification process – platonising – this wood species is suitable for use as cladding, even untreated.

## Technical information

Platowood Poplar is characterised by its even grain, light line pattern and refined colour shades. In addition, the wood feels soft and has a golden hue due to the process. Platowood Poplar offers, just like the other wood species, many advantages.

## Benefits Platowood Poplar

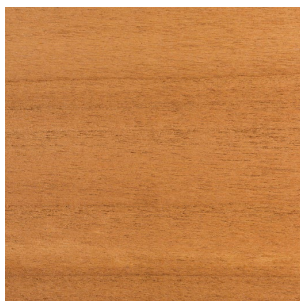

- Environmentally friendly and recyclable
- Dimensionally stable
- Expected lifespan: 50 years
- Low maintenance
- Excellent workability
- 15-year warranty
- Available in various thicknesses, widths and lengths
- Many profilings possible
- Suitable for façade application

## Color options

- Untreated
- Weathered Color: pre-weathered

## Fire class

Platowood wood by default meets European fire class D-s2. When the wood is treated with the fire-retardant Bio FireProtect, European fire class B-s2, d0 can be achieved.
